

Major-accident Prevention Policy (MAPP)

01/03/2017

COL LEIXÕES

The Board of Luís Simões, aware of its concerns, responsibilities and commitments regarding safety and the preservation of the environment, has defined the Major-accident Prevention Policy involving dangerous substances for the Leixões Logistics Operations Center (**LOC Leixões**).

This policy aims at ensuring the implementation of the Safety Management System for Major-accidents (SMSMA) and ensuring a high level of protection of human health and the environment, taking into account the following principles:

- Ensure training in the prevention and response to major-accidents to its employees, as well as to service providers of LOC Leixões, by providing instructions, good practices and appropriate procedures for ensuring that risk activities are carried out by trained and qualified professionals, aware of the relevance of their actions regarding the prevention of major-accidents;
- Comply with the applicable legal requirements and other good practices requirements that LS may endorse in terms of safety and major-accidents prevention;
- Identify, assess and manage the risks involving the hazardous substances inherent to the activities of LOC Leixões, including change management that may affect the risk of major-accidents;
- Ensure that operating and maintenance procedures are in place that guarantee the safe operation of facilities, equipment and processes deemed relevant in terms of major-accident hazards. And the subsequent compliance thereof;
- Ensure that the necessary means and resources are available to establish, implement and maintain the SMSMA in order to promote continuous improvement of its performance and progressive reduction of the risk of major-accident hazards.
